About AirVision

AirVision is an advanced air quality monitoring and prediction platform that leverages cutting-edge machine learning technologies to provide accurate air quality forecasts and historical data analysis. Our mission is to empower individuals, communities, and organizations with the information they need to make informed decisions about outdoor activities, health precautions, and environmental policies.

Our Technology

AirVision utilizes a combination of:

- Real-time sensor networks
- Satellite data integration
- Machine learning models (neural networks, random forests, SVMs)
- Meteorological data correlation
- High-performance computing

Data Sources

We aggregate data from multiple reliable sources including:

- Government environmental agencies
- Research institutions
- IoT sensor networks
- Weather data providers
- Community-contributed measurements

About AirVision

Providing accurate air quality predictions and historical data to help you breathe easier and live healthier.
